Shift Your Cloud Investment Into
High Gear

Quisitive's High Gear focuses on bringing companies advanced modernization capabilities needed to innovate and deliver business outcomes within the Microsoft clouds.

Built on modern DevOps principles and your organization's specific business and technical challenges. High Gear accelerates innovation, enabling organizations to efficiently deliver value in a world that requires agility to address increased competition and business pressures. These efficiencies are only realized through enhancing systems and processes and adopting modern applications designed for the cloud.

Optimization and modernization with Quisitive's High Gear services deliver:

1. Sustained performance enhancements
2. Accelerated timelines
3. Virtual delivery and remote worker enablement
4. Leadership and support for modernization efforts
5. Ability to scale with additional capabilities and benefits

Microsoft Partner
Microsoft

Advanced Specialization
Modern Application Development

Our long-standing partnership with Microsoft and Advanced Specialization in Modern Application Development are rooted in our deep understanding of what it takes to successfully connect technology to valuable business outcomes.

We understand that different industries and companies have different needs and constraints. Whether you have just started your modem application journey or have already made it down the road, Quisitive will meet you where you are to help accomplish your goals.

Driver's Seat
HIGH GEAR

You need subject matter experts to help navigate the project.

High Gear: Driver's Seat is a staff augmentation approach, designed for companies who want to own to the project and already have clearly defined business needs and desired project outcomes. Quisitive provides the extra sets of hands and the outside perspective to get the job done right.

This engagement approach includes:

✔ A typical timeline of 4-6 weeks
✔ Architects to guide and promote best DevOps practices
✔ Experienced Scrum Masters who are familiar with the process
✔ DevOps engineers to implement various tooling for your team

Co-Pilot
HIGH GEAR

You understand what needs to be done, but you're unsure of how to do it.

High Gear Co-Pilot is a training-based approach, designed for companies who need to bring in an experienced partner like Quisitive to lead the project and assist in building the internal capabilities needed to success going forward.

This engagement approach includes:

✔ A team of experts to help guide and train your staff
✔ In-depth project planning
✔ Backlog creation in Azure DevOps
✔ Guided Scrum Events (Ceremonies)
